

WHG Introduces FleetWEIGH: The latest TCA Approved Smart Onboard Mass system.

WHG proudly launches FleetWEIGH, a TCA approved innovative Smart Onboard Mass system for air suspension trucks and trailers. This groundbreaking fleet management solution showcases easy to install, reliable fusion of modern Bluetooth and sensor technology for seamless integration with real time in-cab plus remote monitoring. FleetWEIGH was developed in partnership with WHG, Trail-Link and a US based technology group, bringing together market leaders, drawing on expertise to launch an innovative product, never seen before. Designed to be robust for rigorous trucking environments, it allows for the instantaneous display of truck weight on smart devices, ensuring safe and compliant weights. The push towards digitisation and enhanced functionality in fleet management has grown, and FleetWEIGH caters to this demand with its advanced features.

WHG continuously pushes the boundaries of innovation, focusing on creating products that drive efficiency, safety, and profitability. FleetWEIGH is the embodiment of WHG's commitment to uplift ease and efficiency of fleet management through technology. Being the only provider in Australia to offer an all-inclusive solution which integrates both telematics and an on-board mass system, WHG solidifies its position as a frontrunner in the transportation technology industry. With over 35 years of industry experience and fitting 45,000 devices a month, WHG are Australia's most trusted telematics partner.

Type-Approved™

Smart OBM System (Category B)

FleetWEIGH stands out as the pioneer in Smart On-Board Mass Weight System. Its integration with smartphones and tablets ensures that truck and trailer weight information is always at the user's fingertips. Designed with enhanced fleet management in mind, any vehicle with a FleetWEIGH system can be accessed remotely for easy and compliant weight monitoring. With a robust design prepared for the most demanding trucking conditions, the system also integrates with WHG's telematics, offering remote visibility for fleet managers.

Satya Parikh, WHG's Service Manager, remarks, *"FleetWEIGH is not just a product; it's a revolution in fleet management. Offering real-time data on loads and weights, it ensures that both drivers and fleet managers are always informed, ensuring compliance and enhancing operational efficiency."*

Addressing the need for a Smart OBM system, especially when mandated by road managers or regulators, FleetWEIGH was conceptualised and designed. WHG's advanced In-Cab Driver Display allows the driver to monitor real-time axle loads with integrated telematics reporting.

FleetWEIGH provides users with real-time weight data, battery status for sensors, and a range of options for vehicle combinations. Adhering to TCA requirements, it ensures that it is both reliable and compliant for fleet operations.

WHG envisions a future where fleet management is simplified, efficient, and fully digitized. FleetWEIGH is a significant stride towards that vision, reflecting the company's commitment to providing solutions that matter. With FleetWEIGH, customers are assured of quality, reliability, and the unparalleled support from the WHG team.
