

WHG & LOGMASTER: Electronic Work Diaries (EWD), Regulatory Telematics, Compliance, Smart OBM & More, All Within A Seamless, Fully-Connected Technology Ecosystem.

"This partnership is about expanding our connected ecosystem to incorporate more of the transport operation and daily driver responsibilities," said Dylan Hartley, Director of Operations at WHG.

"WHG's technology platform goes beyond telematics, centralising vehicle technology and in-vehicle tablet management, to streamline data across your entire fleet. By reducing driver distractions and delivering a fully managed service, we eliminate the need for multiple systems—giving fleet operators a seamless, smarter, and compliance-ready solution."

An Industry-First: Automating Mass Declarations

A major breakthrough in this partnership is the automation of mass declarations, a first for the transport industry. By integrating WHG's FleetWEIGH Smart On-Board Mass management system with Logmaster's EWD compliance platform, vehicle mass data will be automatically captured and transferred into the EWD, eliminating manual paperwork, reducing errors, and ensuring compliance with NHVR mass requirements.

Two of Australia's leading innovators in fleet technology and compliance, WHG and Logmaster, have joined forces to deliver a seamless, fully connected solution for fleet operators.

This powerful partnership integrates WHG's cutting-edge suite of technology, Regulatory Telematics, Smart On-Board Mass Management, and Smart Wearable Fatigue Management with Logmaster's NHVR-approved Electronic Work Diary (EWD) creating a centralised platform that simplifies compliance, enhances safety, and improves operational efficiency.

With WHG embedding Logmaster's EWD and compliance tools into their Connected Technology Ecosystem, fleets gain access to end-to-end compliance and fleet management and data centralised in one place. This partnership provides drivers and operators with all the tools they need to experience a new level of efficiency through streamlined technology.

A Smarter, More Efficient Way to Manage Compliance

Compliance is a critical challenge for transport operators. To combat the increase in regulatory requirements, such as the need for real-time oversight, seamless reporting and more, Logmaster's EWD provides automated fatigue management, real-time compliance alerts, and audit-ready reporting. Utilising Logmaster & WHG's interconnected technology, drivers and fleet operators can significantly reduce the administrative burden of compliance and regulatory requirements for themselves and their teams.

"The advanced compliance automation features available for transport operators as part of this integrated solution are incredible." said Josh Saunders, Managing Director at Logmaster.

"Operators running compliance with Logmaster and telematics solutions with WHG will have a fully automated compliance solution that improves accuracy, saves time, and even simplifies mass accreditation reporting. With our NHVR-approved EWD now working within WHG's ecosystem, operators will experience a whole new level of efficiency and control."

Key Benefits for Fleet Operators

By combining WHG's market-leading telematics and driver safety technology with Logmaster's compliance expertise, fleet operators gain multiple benefits:

A Fully Integrated Compliance and Fleet Management System: Streamlining workflows and improving efficiency with EWD tech.

Automated NHVR-Compliant Mass Declarations: Reducing paperwork and simplifying reporting.

A Single, Centralised Platform: Eliminating the need for multiple, disconnected systems.

Real-Time Compliance Monitoring and Alerts: Keeping businesses compliant and audit-ready.

Enhanced Driver Safety & Reduced Fatigue Risks: WHG's FleetPREDICT wearable fatigue monitoring technology as an integrable option.

Streamline Suppliers and Support: Reduce the time wasted juggling multiple suppliers and technology systems.

"At WHG, we are committed to building a smarter, safer, and more connected fleet ecosystem," added Dylan Hartley.

"Our partnership with Logmaster is a key step to turn that vision into a reality - giving operators the confidence and tools they need to run their fleets efficiently and safely, bridging the gap between regulatory Telematics and your Electronic Work Diaries."

About Logmaster

Logmaster is a leading provider of transport compliance tools and systems. Logmaster offers NHVR-approved Electronic Work Diaries, driver fatigue monitoring, compliance automation, and real-time reporting to help fleets stay compliant, reduce risks, and improve operational efficiency.

Remove the need for paper work diaries with Logmaster's EWD Solution.

About WHG

WHG is a global technology leader, connecting over 45,000 devices per month across multiple industries. WHG specialises in fleet telematics, driver safety, compliance solutions, and mass management, and more, through its Connected Technology Ecosystem.

WHG is certified by Transport Certification Australia (TCA) to offer services through the National Telematics Framework as an Application Service Provider (ASP), this certification encompasses type approval of WHG's telematics device and their Smart On-Board Mass (OBM) system.

Partner with WHG to explore how our technology can support your business.
